

DSAINTE Financial Model Overview

Distributed Sovereign AI Infrastructure Nodes Technology

Infrastructure Ownership Financial Strategy

Executive Summary

The DSAINT financial model is designed around a long-term infrastructure ownership strategy rather than ownership of rapidly depreciating computing hardware.

The model focuses on creating sustainable recurring revenues through ownership and operation of critical AI infrastructure assets including land, facilities, power systems, cooling systems, security infrastructure, and connectivity networks.

This approach seeks to combine:

- Stable infrastructure revenues
- Long-life asset appreciation
- Predictable operating cash flows
- Scalable expansion potential
- Reduced technology obsolescence risk

The financial strategy is aligned with the development of a distributed sovereign AI infrastructure network across Germany and Europe.

Financial Philosophy

Traditional AI Infrastructure Model

Many AI operators invest heavily in:

- GPUs
- AI accelerators
- Servers
- Storage systems

These assets typically depreciate within:

3–7 years

This creates:

- High replacement costs

- Technology risk
 - Capital intensity
 - Volatile returns
-

DSAINTE Infrastructure Ownership Model

DSAINTE focuses investment on:

Long-Life Assets

- Land
- Buildings
- Power infrastructure
- Cooling systems
- Security systems
- Fiber connectivity
- Utility infrastructure

Typical asset life:

20–40+ years

Benefits:

- Reduced technology risk
 - Higher asset retention
 - Predictable depreciation schedules
 - Long-term value creation
-

Demonstrator Node 01

Location

Bedburg-Hau, Germany

Planned Capacity

Initial Capacity:

2 MW IT Load

Expansion Capacity:

Up to 6 MW

Operational Model

Infrastructure Ownership & Operations

Capital Expenditure (CAPEX)

Demonstrator Node 01

Category	Estimated Cost
Land & Site Preparation	€4.5 M
AI Infrastructure Core	€11.5 M
Cooling Systems	€6.5 M
Electrical Infrastructure	€7.0 M
Admin & Operations Building	€2.5 M
Maintenance Building	€1.8 M
Employee Housing	€1.8 M
Security Infrastructure	€1.0 M
BTES Geothermal System	€1.8 M
Engineering & Permitting	€3.3 M
Contingency Reserve	€2.3 M

Total Estimated CAPEX

€43 Million

Annual Operating Expenditure (OPEX)

Category	Annual Cost
Personnel	€1.6 M
Electricity (Infrastructure)	€2.0 M
Maintenance	€0.8 M
Security Operations	€0.5 M
Connectivity	€0.4 M
Insurance	€0.3 M

Category	Annual Cost
Administrative Costs	€0.4 M
Sustainability Programs	€0.2 M
Reserve & Contingency	€0.3 M

Estimated Annual OPEX

€6.5 Million

Revenue Model

DSAINTE generates revenue through multiple recurring infrastructure streams.

Revenue Stream 1

Infrastructure Leasing

Services:

- Rack leasing
- Private suites
- Dedicated infrastructure zones

Characteristics:

- Recurring contracts
 - Predictable utilization growth
 - Long-term customer relationships
-

Revenue Stream 2

AI Infrastructure Hosting

Services:

- Power delivery
- Cooling provision
- Facility management
- Security services

Characteristics:

- Capacity-based pricing

- High recurring revenue potential
-

Revenue Stream 3

Connectivity Services

Services:

- Fiber infrastructure
- Carrier-neutral access
- Dedicated network services

Characteristics:

- Recurring service fees
-

Revenue Stream 4

Enterprise Infrastructure Services

Services:

- Industrial AI hosting
- Digital twin environments
- HPC infrastructure

Characteristics:

- Long-term enterprise contracts
-

Revenue Stream 5

Research Partnerships

Sources:

- Universities
- Research institutes
- Innovation programs

Characteristics:

- Project-based revenues
 - Grant-supported infrastructure use
-

Revenue Stream 6

Sustainability Partnerships

Future opportunities:

- District heating integration
- Waste heat recovery
- Utility cooperation

Characteristics:

- Supplemental recurring revenue
-

Revenue Projection Model

Demonstrator Node 01

Year 1

Infrastructure utilization:

30%

Estimated Revenue:

€4.0 M

EBITDA:

Negative (ramp-up phase)

Year 3

Infrastructure utilization:

60%

Estimated Revenue:

€9.0 M

EBITDA:

Positive

Year 5

Infrastructure utilization:

85%

Estimated Revenue:

€15.0 M

EBITDA Margin:

25–35%

Full Expansion (6 MW)

Infrastructure utilization:

90%

Estimated Revenue:

€30–40 M annually

Target EBITDA Margin:

35–45%

Funding Strategy

Potential funding sources include:

Founder Capital

Initial project development activities.

Strategic Investors

Long-term infrastructure investors.

Examples:

- Infrastructure funds

- Family offices
 - Strategic industry partners
-

Public Funding

Potential programs:

- European innovation initiatives
 - Regional development programs
 - Sustainability funding
 - Research infrastructure support
-

Project Financing

Debt financing secured against:

- Land
 - Buildings
 - Infrastructure assets
-

Economic Impact

Demonstrator Node 01 is expected to contribute:

- Direct employment
 - Construction activity
 - Regional procurement
 - Technology ecosystem growth
 - University partnerships
 - SME development
-

Network Expansion Economics

Target Network

By 2040:

10+ distributed European nodes

Potential Network Capacity:

20–60 MW+

Potential Network Asset Value:

€400–800+ Million

Potential Network Revenue:

€150–300+ Million annually

Financial Risk Management

Key Risks

Construction Risk

Mitigation:

- Phased development
- Fixed-price contracts where feasible

Utilization Risk

Mitigation:

- Pre-leasing strategy
- Strategic partnerships

Energy Cost Risk

Mitigation:

- Efficient cooling
- BTES integration
- Long-term energy planning

Technology Risk

Mitigation:

- Customer-owned compute hardware
 - Infrastructure-focused ownership model
-

Long-Term Financial Vision

DSAINTE aims to create a portfolio of sovereign AI infrastructure assets that generate recurring revenues while supporting European technological sovereignty and regional economic development.

The long-term objective is to establish a financially sustainable infrastructure platform capable of supporting future generations of AI, cloud computing, research, and digital services.

Key Financial Targets

Metric	Target
Demonstrator Node CAPEX	€43 M
Annual OPEX	€6.5 M
Expansion Capacity	Up to 6 MW
Network Target	10+ Nodes
Target Timeline	2040
Target EBITDA Margin	35–45%
Infrastructure Asset Life	20–40+ Years
